

ARV Protocol B Target tasked by Anita Ikonen - ARVB2

Remote viewed by Anita Ikonen - Method EEC

Target no target number

Today April 30, 2019

Start 12:47 noon

ARVB2

ARV Session 2

LEFT TARGET : Mathematically, 3 plus 4 equals = 7

RIGHT TARGET : Mathematically, 3 plus 4 equals = 1007

Today April 30, 2019

Start 12:47 noon

We are in a pleasant place with structures that are low like tables or fences in height, it is all dark gray and black and there is one person here who is very pleasant. Gentle calm conversation is taking place here, he is kind and pleasant, he is speaking to at least three other people who are on the other side of the fence. He is standing up on the right side, the three others are sitting on the left side of the fence.

I see a strong image of a brown chicken, very nice and plump with brown feathers. This image suddenly formed strongly as if a force compressed into the center to form a strong image out of force or focus by itself.

There is walking taking place, the chicken is walking. The man stands now on the right side and he is talking gently and explaining something, he speaks slowly.

The man who is standing on the right side against a fence.

12:57 noon End RV. Summary, it feels again like two images, as if the people speech and the brown chicken were two separate places. The people speech comes across as the main image though, if maybe I have to make a choice.

I can now look at the images. Or no! I remembered, I have to take a break to reduce the potential risk for displacement! I will return after 30 minutes to see the pictures.

12:58 noon Displacement break before feedback and judging.

1:08 PM Ok it's been 10 minutes and I was away from the computer and room.

I will look at the left image first. I try not to reconnect with the target signal as I do, because I felt the target signal trying to push its impressions into my mind again (of the dark gray room with the people).

Left image is a strange little graphical image.

Right image is a gray room with lots of mechanical parts and machinery.

There is no brown chicken on either of them, and no people on either of them. The left image is not suitable as an RV target image, the right image is very suitable as an RV target image.

What I should get the habit of doing, is that when there is an unsuitable image then I should do another session with the same question.

LEFT image

Conclusion: It felt as if the brown chicken and the gray room with people were two different places, I felt therefore during the session as if I may be remote viewing both target images. Somehow the left image is perhaps somewhat like the brown chicken, and the gray room is definitely a good match with the right image.

The correct answer of the question is left, so ideally only the left image should have been shown and not the right image at all. However, we do have the problem that the left image is not suitable as an RV image, so I will run more sessions. One can see why an RV mind would be faced with these two pictures and want to go to the machine room instead of to the small image.

Further sessions need to be done. No conclusion can be made as to if ARV works on finding the right answer to a question, based on this session, because the left image is not a suitable RV image. Interesting still that I made a fairly decent depiction of the right side image the machine room, at least to acceptable standards. Reminder that I only do initial stage and no probing on these ARV sessions because the purpose is only to match the report to one of two images and not to explore the target in itself.

1:16 PM End session.
