

Group Matching Target tasked by Lyn Buchanan - GM6LB5

Remote viewed by Anita Ikonen - Method EEC

Target Apr 19 , 2006

Today May 14, 2018

Start 6:59 PM

May 14 2018. Start 6:59 PM.

Sixth Stage 2 RV test. Target 5.

I tried to cover the clue but darn I saw it, this target is a location. I really hate the clues they ruin my information flow and form thought processes. I am just going to do my thing but I am upset that I saw the clue, the clues really should not be there they are not helpful to anyone.

This target is named Apr 19, 2006.

This one has a solid wall that vibrates, it is steel or brick or stone though I do not see the brick outlines but I like the texture of bricks like cement. There is a vibration, a tremor that is carried throughout the upright standing wall of this structure, the tremor starts on the ground and is picked up by the wall and moves upward until the whole wall maintains a uniformly distributed steady vibration, not a violent shaking but a vibration which is coming from the ground.

There are earthy musky dark smells here.

Dark solid walls.

The vibration is like music that is playing and being picked up by the wall. The vibration is really a notable thing. Gray thick upright standing wall which has the tremors or vibration throughout it. Note that the vibration starts from the ground and is picked up at the ground and is transported upward to be in the entire wall.

Step method: Vibration: there are wires and cables (not initial element). The wire is limp and loose on the ground or floor as an electrical cable and the outer casing of this wire is a mellow BluTac kind of gray blue as a plastic insulating casing, the wire makes S-shaped curves on the floor the way that it is placed and is not straight or tight.

The wall is a heavy dense thick block of wall or concrete that stands upright and sits on the floor level and a tremor is transplanted across it and this tremor came from the bottom and upward until it was evenly dispersed across the wall.

Step method, cable: the cable has electricity that is going in the direction *toward* the wall, and ouch it pinches me with an electric shock if I touch the thin metal wires that are inside of the insulating plastic casing. This wire transports electricity to the wall or to the floor underneath the

wall.

Put your hands on the wall: I can feel that the wave tremors are moving upward, even though the waves individually have their oscillating fields parallel with the floor, see the drawing. The yellow waves drawn are the sound waves or tremors moving upward, the squiggly blue lines only indicate the manner in which the actually existing yellow lines move upward and of course as the yellow ones move upward due to their own oscillation and waves it looks squiggly and not like straight up along a vertical straight trajectory.

This wall is massive and thick. The wall is impersonal and it does not have a character that it cares about anyone or anything. The wall has no character.

I am there at the target location, I stand there. Ah! The whole floor I am standing on is vibrating with tremors! I can feel my body shaking a bit the whole floor has those tremors, the tremors yes I did say they come from the floor and upward but it is not just the wall that feels them the floor is feeling them too!

It is an electrical tremor. The blast, it is a sound blast, that shook the ground and reverberated upward in the walls!

The floor is a solid black and is not sand, water, or grass for instance. There is a terrible thing here because the whole ground is shaking. The colors are black and dark and the floor and walls are smooth and dense and solid and firm.

It smells like electronics. The black thing could be a loud speaker. Ouch! I tried to touch the black wall and it pinched me with electrical spark!

When I go to stand behind the wall I find a curved shape I will draw it.

There are people in front of this, so this could be a stage. Like an audience further in front but they are facing toward this setup of things. There is no water on this target (obviously too, huh, cause of all the electronics but I checked if I could feel some water and I did not).

A solid dark gray wall that conducts electricity.

I don't understand what it is I am looking at, so I will leave it as a description with a specific label. I am not familiar with this setup from my past experiences.

7:29 PM End.
