this target does not want to show me anything more
"All the blue"
Very much blue, could be water since when I probe it I feel that it wants to take me on a slow travel alongside its surface. Large smooth oval shapes could be large stones. There is brown sand under the blue. A blue ladder or a shelf on the left. The blue went also vertical on the right side, with sand underneath it again.
Found water, rocks, sand. Not found human, animal, plantlife, vehicle, manmade object, house, electronics. Movement along the surface of the water. No emotions. Significance of the target is that the blue has a meaning.
I have saved the target. I will now right away generate and save a decoy.
Matching: Neither image shows a correlation. One of the images appears to be a broken file, when I went back to its webpage it may have a small version of the image further down which may be the image of a large Greek style palace or political building if that is what the file was meant to be. How do I choose a match when neither image speaks to me? I choose the file that has the building because the stones are similar in shape to the arch of the windows, and there is stone in the foreground, but I am not happy with this match.
Outcome: I chose the correct image, the building was created first, and the flawed image was created second. I suspect merging, because something about the white and gray checkered empty file of the decoy may have formed what became the wide open blue space, and the rocks and sand from the target image.
