I enjoyed this one, at first it was hard to find elements to work with, it was just a black space with some flat low wall panels. It reminds me of a car repair shop. We are indoors. One wall to the right has large windows that are set up high, these are industrial workshop factory type of windows or so they seem. There is a human who has black bushy eyebrows and a brown moustache, he is not happy he is more like serious and focused at work. He is working on a car which is to the left, or he also holds a rope in both hands as drawn. There is a ceiling above us, and into-page is a blue wall. The blue is something which is a bubbling liquid, bubbles are rising up from it and breaking up above the surface of this liquid. There is such a liquid in a barrel, and not knowing what all the barrels contain there are many barrels over to the left not drawn. There are round parts, drawn in black. One board or bar which feels metal has many black round things along its length and this bar is set against the ground in terms of its elevation. The pale gray round thing drawn in front of the man's face is a nut like in nuts and bolts. I sense and see glimpses of a car to the left. The man was seen wearing a blue cap hat and blue overalls with suspenders over the shoulders and chest. Some curved gray shape to the left as drawn. Detected were human, human activity, he is working here with something, but not working primarily with his hands as one would think, it seems more that he was looking at the car to the left. The blue liquid forms bubbles that rise up, so there is a liquid unsure if specifically consisting of water and not some other liquid. No plantlife of any kind was detected. Vehicle detected, also this whole complex has an industry factory kind of feel with many parts and barrels and things like a big industrial size workshop technical and mechanical. The target site itself is inside a house.
Target PDF, two decoy PDFs, and matching done without delay.
Matching: I have looked at all three image options. I now take a pause to see a tv program. After one hour I will come back to explain my choice, I will of course choose the image with the large airplane wheel in closeup.
8:00 PM Pause from matching to watch a tv program.
9:10 PM Resume. The pictures are a lake with mountains and boats, closeup of what I think are airplane wheels, huge mountain scenery with snow. My choice is to match the report to the image with the airplane wheels.
Outcome: The target was the mountain scenery, I chose a decoy. My report had no nature, no plants, no rocks were detected. The correlation to the target image is poor.
