The first element that showed up was the green treetops, they seem significant and are shown as important. There is a hill downward on the left, and there is a yellow curve shape which on the ground seemed covered by clear water and the yellow was shining with yellow light upward radiating outward. The yellow brim also occurs higher up, and there it has a gray metal roof above it, and brown walls continue downward. On top of the gray roof is a gray pipe, this whole structure is a chimney which lets out white smoke or vapour. There are also red bricks (my favorite!) and the red bricks form a not very tall square perimeter and has a roof over it, this brick thing continues downward as a dark chute and also lets out billowing not dark smoke, this structure is a chimney. A flat gray disk was seen carried by a human hand with fingers held underneath it like a waiter, I also saw a human face with a brown pipe in the mouth. Pipe and chimneys both let out smoke so that is a significant recurring element.

Target PDF, two decoy PDFs, and matching all done without delay.

Matching: First image has red bricks and a skull and bones figure on the wall and trees are seen in the background. Second image is two women in a pottery shop. Third image is some signs on dry grass and a house and flags in the background. The picture with the women in the pottery store has no resemblance to my report so I eliminate it first. The signs image has no resemblance and also does not feel right. The image with the wall and trees resembles well and I feel that I recognize it, so my choice is to match my report to the image with the bricks wall that has a skull and bones figure and green trees in the background.

Outcome: Again the two decoys were done too soon after one another so they both have the same time stamp. I go to internet browse history to find out which one was opened first, to know which one was decoy 1 and decoy 2. First image made was St. Angelo Fort. Second image was Svatava. Third image was Karen Pence. This means that the brick wall was the target, the dry grass and signs was decoy 1, the women in the pottery store was decoy 2. I chose the target image.

Is switching, merging, or fail suspected for this session? Switching cannot be suspected, since the report does not show a strong resemblance to either of the two decoy images. Merging is possible since I saw humans, but we remember that my experience has shown in recent several sessions with this target pool and similar several different kinds of protocols that figures of humans, such as statues, tend to show up in my reports (or so I suspect at least) as real humans or real animals (I point specifically to the session where the several old men with beards which was a carving or cast ornament, showed up as the white hairy dog in my report with a strong resemblance). There is a human-like figure on the target image as well, so the human impressions in my report are not necessarily due to merging from the decoy with the two women. House elements could have come from the house on the decoy that has the house on it, but that is not for certain since I mostly only

described the red bricks which is strongly in the target image, but the depictions of roofs could be merging from the decoy with the house, it is not for certain, a case of merge is not strongly seen in this session. Correlation between report and target image would have this session not count as a failure.
