

Internet Search Image Targets 6B Target tasked by internet image search - IN6B3

Remote viewed by Anita Ikonen - Method EEC

Target no target number

Today April 14, 2019

Start 1:00 PM

Internet Search Images B6 Target 3

Today April 14, 2019

Start 1:00 PM

Six search words from a search engine, I know the words from start of session.

Eyes Music Player Turkey Vest Legs Crest

Blue and cold, something puffy and feels like air on the other side, nothing of red color. But the puffy element only occurs on the front outward, there is nothing on the sides or back of it. It is hollow on the inside. A bit rounded outline on the front.

1:03 PM Secondary stage.

Filled with air, puffy. It has got long thin hairs blonde hairs on the out-of-page side of it. Over the blue element there are thin white threads sewn into it to make puffy padded cushions across it sort of thing.

Warm on the inside on the inner side wall of the blue element. There is a chin and jaw and head above the blue element. It feels cold here. The blond hairs connect to an element above it which has red suggesting tissue of living body (I see that kind of red element when it is body, usually or always that is what it is). There are feet under the blue bulge a bit further below.

I run my finger across the lower border of the blue element and my finger brushes across eyelash hairs. Oh wow, one of the search words is "eyes" I did not remember that, I think I am pretty certain that I found the eyelashes element without logic knowing or expecting to, because I was at the blue element which is not consistent with eyes and I found eyelash hairs so this is profound, or so I think at least!

I should not do more probing because we keep the amount of effort about the same for all these sessions.

1:12 PM End RV.

At first glance I was going to want to give this session an F, but we have many of those bulging arch lines that have nothing on the sides or back of them, and the thin lines I drew which sectioned out regions across the blue element are also found on the target image. The hairs are also found, as the short vertical black lines. I grade this session an A.

It is perhaps problematic, meaning incorrect, that I sensed elements of a human body, and the blue

color, and the cold temperature, but how does RV work? Usually RV goes to the target and not to the photograph, was there a human holding up the notes, was it cold there, we don't know. That is why target images that show the surrounding landscape and not just the central target element are better for remote viewing, since we can check the surroundings also for correlation, and here we cannot since the image is a closeup.

Would I have found out that the target is a sheet of music had I done more probing? Who knows, in these sessions we only grade for correlation based on initial impressions and a bit of probing. Grade is A and I think that is easily justified.

"Music player" meant as one word.

1:18 PM End session.

1:22 PM Notes: By the way while I was perceiving and drawing the gridlines over across the blue element, logic was thinking that this must be the way some vests are sewn to have sections with padding in them, because logic knew the search words, that is why I also used that kind of words of "sewn" instead of just saying that I see lines that section across the blue element, so by knowing the search words we are learning about how logic uses information like that. 1:23 PM End notes.
