Target WR19

Today April 22, 2019

Start 5:39 PM

There is a commotion here, something is being shaken vigorously with small motion shakes. Dark element is shaking.

Probe the element: Massive like made of stone, not smooth or even on the outside surface. Like a drill machine of some sort. Wider on the top than bottom and has a hollow cylindrical narrow space in it from the top.

There is a faint blue element above the stone, is like a hollow thin-shell light bulb. The stone element shakes like a machine. There is a white square sticker on the stone element. The outer edges of the four corners are cut off.

The shape of the sticker might be the shape of the hole at the top surface level of the black stone element.

6:04 PM End RV.

Oh wow I should have continued to work on this target, the square edges and the white sticker and all, I recognize my elements from this building. I give it a C for correlation.

6:05 PM End session.
