Target WR22

Today April 22, 2019

Start 10:42 PM

Gray boulder rock about to fall down the hill, we are on a hill slope.

10:46 PM Secondary stage.

I probe the gray boulder and see there is one blue flag on a pale gray short flagpole. The boulder is about to fall down the hill. The boulder will fall over. The left side of the boulder extends diagonally up-left. I am falling down from trying to hold on to the boulder, I end up lying on my back at its base. I stab it with a pen, it contains some metal in it.

There is a round basket with mesh railing on the right side. The flag is in the basket, above the basket. The basket can go around, or one can walk around inside the basket around the flagpole that is in the middle. The boulder is going to fall. The basket is in the air next to it, it is like a riding basket that we can travel in.

The basket is up in the air. There is some ice there on the railing of the basket. The flagpole feels metal when tapped on it makes a hollow metal pipe kind of chyme sound.

This target has heavy weight from the boulder.

Probe around the large boulder, feel out its sides and top and bottom: It falls over!

What is the relevance of this image: To show that something was going to fall over. A heavy large dark gray object was going to fall over it was too heavy and large to hold it back. Very heavy and it has metal in its composition.

Investigate the floor around the boulder: Granular, and upward sloping hill. The boulder rolls down. Investigate the boulder some more, it could be something else: No new information comes.

Heavy weight falls over is the target. I end up on my back on the ground and with the large gray boulder over me. Investigate the boulder once it is over me: Just a heavy large rock.

11:05 PM End RV.

Well I'll be darned there is the blue flag on the pale gray flagpole. Look at the blue arch, I drew that in a very recent previous session, is this suspected displacement (switching)?

I cannot relate the hill and the heavy boulder that falls to this target image, but the blue flag is there. I also cannot relate the basket to this target. However, because of the blue flag I may have

remote viewed. When I feel into this image I *think* it feels light, not heavy like the boulder. I give this session either a C or a B but that mostly or only relies on the blue flag.

11:11 PM End session.
